Upperbody single arm AR markers example

Frederico B. Klein

Tuesday 19th March, 2024

We are using latex to get accurate scaling here. There are easier ways of doing this, but since you are printing a whole page anyway, might as well include some instructions.
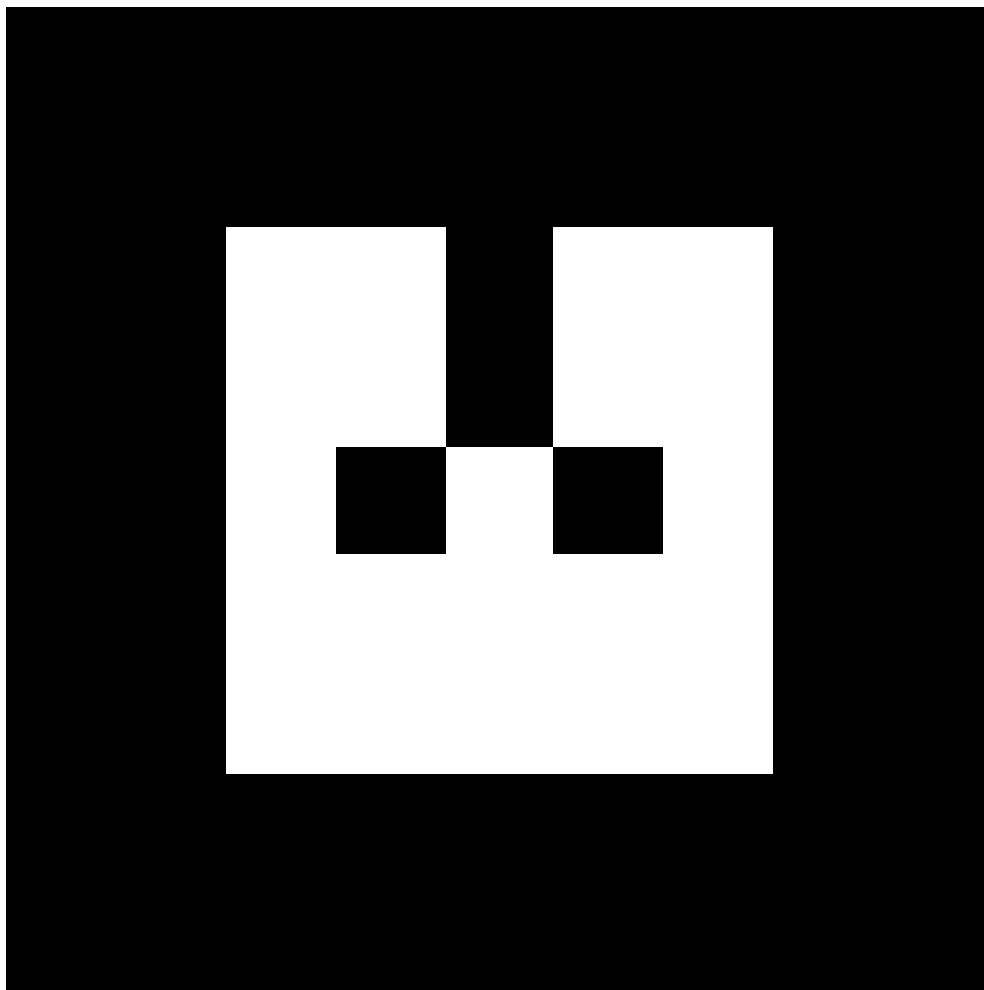

This will print the simplest version of the upperbody AR markers setup. A more complete version would have the complete bundles for each of the bodies. Same can be done for lowerbody. Note the makers need to occupy a large portion of the camera canvas or you will be losing angulare resolution.

Markers are generated using the script from ar_track_alvar with:
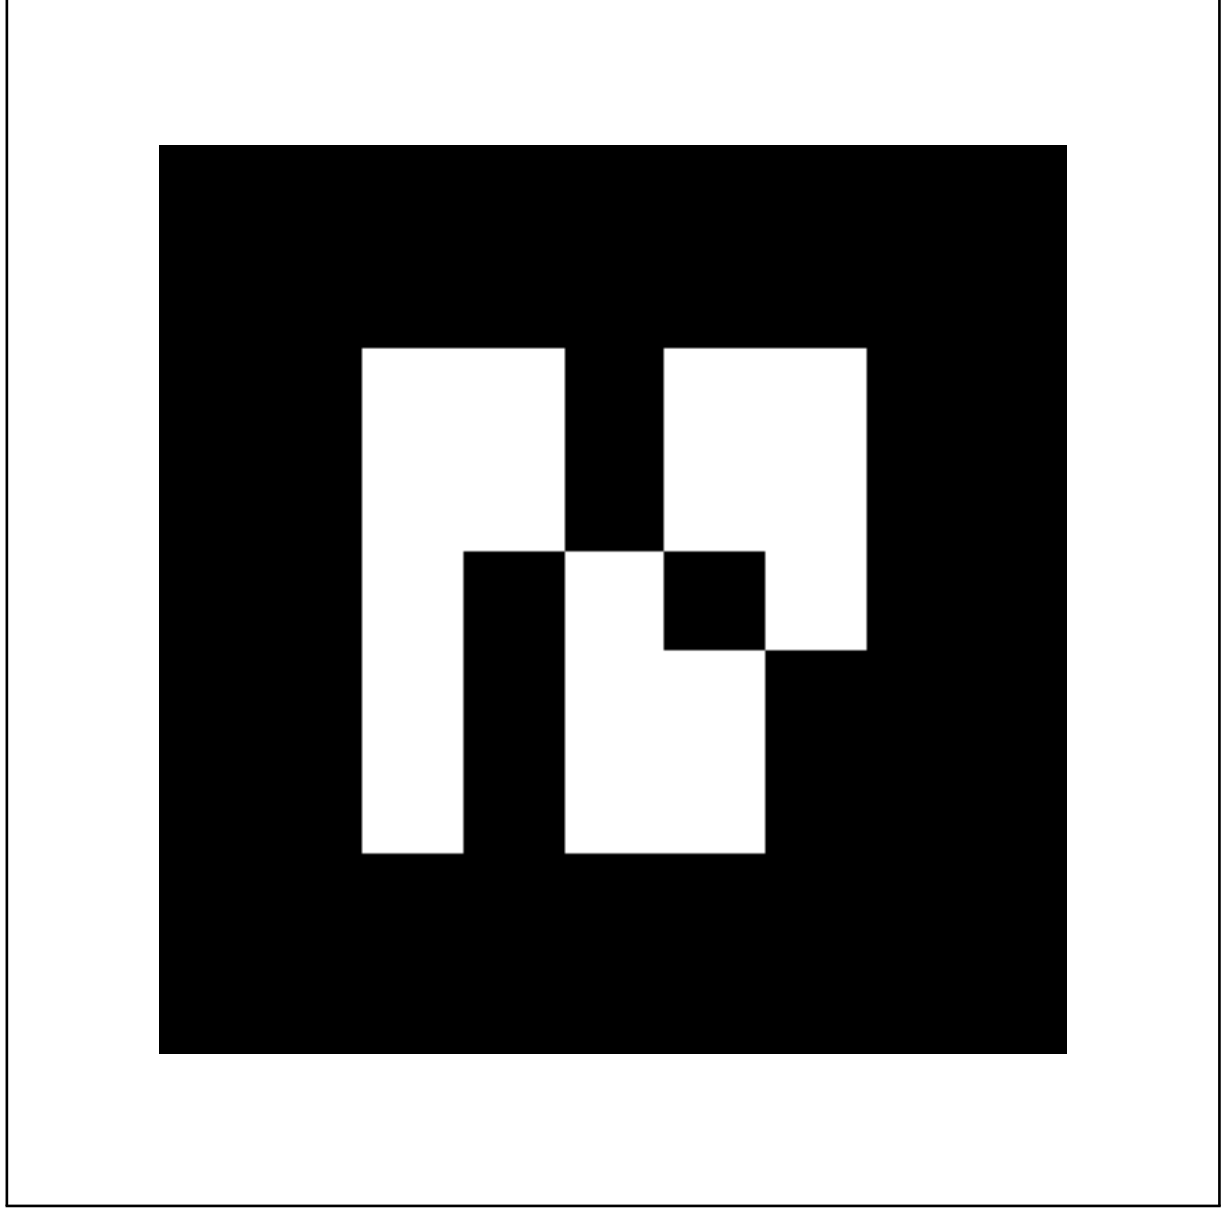

```
rosrun ar_track_alvar CreateMarker
```

AR fiducial markers with actual size.

TORAX

AR fiducial markers with actual size.

UPPERARM

AR fiducial markers with actual size.

FOREARM
